A bright and welcoming working environment

The Dream Building for a Business

Irina Yalcin, Business Owner of Miss Lashes and Partner of D5 Beauty and Lifestyle Verwaltungs GmbH, has created a building which epitomises style. This beautiful building is a reflection of her philosophy and contributory factor to the success of her business:

„Miss Lashes is synonymous with expertise when it comes to the refinement and improvement of eyes and facial aesthetics. As pioneers in eyelash extensions, we have made it our mission to allow everyone a look which radiates expression, elegance and beauty.“

The ground-breaking project began in March 2019 and the company were able to move into their new premises in June 2020. The impact of the flooring was a crucial factor in the new building and with a surface area of 410m², the effect that the flooring has, although often overlooked, it's always there to see.

The company which was contracted to undertake the work, Betec Beschichtungstechnik GmbH, is competent, experienced and successful in the consultation and execution of its work. The VIASOL **ELASTIC UV GREEN LINE ECO** System was selected and applied in a snow white matt colour throughout company's offices.

>> The Future: A sustainable, certified flooring system

Elegant room design – when quality speaks for itself and not much decoration is needed! This is clear and noticeable both in the workmanship and the product itself.

VIASOLELASTIC UV GREEN LINE ECO

Is a decorative, elastic, polyurethane resin coating with very high UV and colour stability. It is footstep sound reducing, comfortable to walk on, warm underfoot, ideal for light chemical and mechanical loads and is available in a wide range of colours and with endless design possibilities.

The preparation work and the treatment on the lower layers, such as the base coat and the levelling layer, are crucial. The top coating will only be clean and homogeneous when there is an even and pore-closed layer underneath. The sealer must be carefully applied, so that the flooring system can be properly closed off. If the layering is incomplete, glossy areas will become visible and if it is applied too quickly, the area can become streaky.

For processing, the products must have good self-levelling properties, optimum deaeration and must not cure too quickly or too slowly.

Flooring for the future: GREEN LINE ECO

TUV-PROFICERT – Interior Product (PREMIUM) certification

- Germany: AgBB with increased requirements on the VOC limit after 28 days
- France: Emissions class A+ in accordance with French VOC regulations
- Belgium: Emissions class in accordance with Belgian VOC regulations
- Finland: Finnish M1 classification (odour test and odour compatibility)
- BREEAM: Exemplary Level
- LEED v4
